

EXERCISE – Transportation Expense vs Probability

In the following video, we will analyse the data stored in the 'Absenteeism_predictions.csv' file from the previous section. We will visualize 'Transportation Expense' against 'Average Probability' on a scatter plot. Then, we will filter by 'Children', which will be the data field which determines color and the size of the dots on our scatter plot can be changed to.

Feel free to attempt to solve this task on your own first. Then, you could watch the video and learn more trips and tricks from us regarding working with Tableau.
