IMPORTANT NOTICE

Regarding the name of a file from the Resources Section of the Jupyter Notebooks (applies to all Jupyter resources throughout the course)

When downloading the files from the resources section of the next video, please make sure you have stored the *.csv file containing the dataset as **XXX_YYY_ZZZ.csv** (with underscores), not as *XXX-YYY-ZZZ.csv (with hyphens)*. The latter will probably lead to the following (or similar) error message in Jupyter:

FileNotFoundError: File b'XXX_YYY_ZZZ.csv' does not exist

The reason:

Depending on your operating system and where you download the files from (Udemy/Dropbox/Google Drive), an automatic renaming of the file may occur.

To avoid ensuing problems, we advise you to stick to the file names used in the provided code.

For instance:

In the lectures, we use the dataset: 'Absenteeism_data.csv' (with an underscore); however, once downloaded, it may be named: '*Absenteeism-data.csv*' (with a hyphen).

Simply rename the file as 'Absenteeism_data.csv' to ensure everything runs smoothly!

Thank you.

The 365 Team
